These instructions are for Windows 10 machines, in which Windows is managing the wireless network connection.

1. From your Windows 10 Start Screen, choose Desktop. From your Desktop, right click on your Connection Icon. Choose Open Network and Sharing Center.

2. Under ‘Change your network settings’ choose set up a new connection or network.

3. Choose ‘Manually connect to a wireless network’

4. Then choose next

Change your networking settings

- Set up a new connection or network
  Set up a broadband, dial-up, or VPN connection; or set up a router or access point.

- Manually connect to a wireless network
  Connect to a hidden network or create a new wireless profile.
Enter information for the wireless network you want to add

Network name: ACM
Security type: WPA2-Enterprise
Encryption type: AES
Security Key: Hide characters

- Start this connection automatically
- Connect even if the network is not broadcasting
  Warning: If you select this option, your computer's privacy might be at risk.

Next Cancel

Successfully added ACM

Change connection settings
Open the connection properties so that I can change the settings.

6. Then choose, 'Change connection settings'
From here you will see ACM Wireless Network Properties.
7. Choose the Security Tab

8. Uncheck ‘Remember my credentials for this connection each time I’m logged on.’

9. Choose, ‘settings’ (next to the drop down Microsoft: Protected EAP (PEAP))

10. In the ‘Protected EAP Properties’ uncheck the
‘Verify the server’s identity by validating the certificate

11. Choose ‘Configure’ (next to the secured password).
12. Under the EAP-MSCAPv2 window, Uncheck the ‘Automatically use my Windows log on name and password (and domain if any)’

13. Choose OK

14. Choose OK (again) on the ‘Protected EAP Properties’ window

15. From here, choose ‘Advanced settings’

16. Under ‘Advanced settings’ CHECK ‘Specify authentication mode’ then, from the down arrow, choose ‘User Authentication’

17. Choose ‘Save credentials’ and it will prompt you for your username and password. This will be your ACM username and password.
18. Choose OK on the username and password window.

19. Choose OK on the Advanced Settings window.

21. Choose Close on the manually connect to the wireless menu.

22. Close your Network and Sharing Center window.

Your Network Icon should now indicate that you are connected. This process may take a few minutes.

If your icon does not change to indicate you are connected, click on it, choose ACM from your Wi-Fi list and click connect.

If you need any additional help please check with the following:

Faculty and staff:

https://ithelpdesk.allegany.edu or call ext. 5444 from any campus phone.

*Please note:

You can forget the ACM network by going into your network settings, choosing manage wi-fi settings, go under Manage Known networks, choose ACM and click on forget. This does not delete the profile from your machine. If you want to delete the profile see below.

Once you connect to any Wi-Fi network on a windows 10 machine, you cannot easily delete the network from the windows interface. To delete a wifi network you will need to access the command line prompt and type netsh wlan delete profile name = “profilename” In this case, “profilename” = “ACM”
